Switched & Outlet Metered PDU VMR Series

Switched PDU with Per Outlet Power Metering

Power Control & Management:

- Remote Individual or Group Outlet Switching
- On/Off/Reboot/Default/Load Shed Switching
- Outlet Sequencing & Power Up Delays
- User-Defined Power-Up Default Status & Outlet Status Retention
- Plug Naming, Grouping & Access Control
- Scheduled On/Off/Reboot Switching
- Ping Watchdog with Auto Reboot
- Automatic Power Transfer Switch(ATS Models Only)

Metering/Monitoring/Reporting:

- True RMS Current Metering
- Total or Branch Specific Metering
- Reports kWh, kW, Amps, Volts, Temperature
- Over-Current High & Low Alarms
- Over-Temperature Alarms
- Ping-No-Answer Alarm
- Invalid Access Lockout Alarm
- Power Cycle & Lost Voltage (Line In) Alarms
- Circuit Breaker Open Alarm
- Alarm Notification via Email, SNMP, SYSLOG
- Alarm, Command, Access Audit, Current, Voltage, Watts and Temperature Logging

In-Band/Out-of-Band Access:

- In-Band (10/100/1000Base-T Ethernet Port)
- Out-of-Band (External Modem Ready)
- Local (RJ45 RS232 SetUp Port)
- Supports Both IPv6 and IPv4

Security & Authentication:

- HTTPS, SSHv2, SNMPv3
- Transport Layer Security (TLS) v1.2, v1.3
- IPSec (Server/Client) & OpenVPN
- IPTables / Static Routes
- Supports Duo, RSA, Okta & Azure Multi-Factor Authentication
- SAN Certificate Support
- AAA: LDAP/Active Directory/Kerberos/RADIUS/TACACS+
- Embedded Validated FIPS 140-2 Cryptographic Module
- Port-Specific Password Protection
- Invalid Access Lockout & Alarm

Unit Management:

- Compatible with WTI NetReach® Centralized Management Software
- CLI & HTML5 Web-Based GUI
- SNMP & Full MIB Support
- FTP/TFTP/SFTP/SCP
- DHCP/DNS/DDNS
- NTP for True Server Sync
- Multiple Concurrent SSHv2 Sessions

DevOps Automation:

- RESTful Web Services API
- Ansible Galaxy Collections Support
- SYSLOG & Streaming Telemetry Support
- WebHook Support (Slack/Splunk/WebEx)
- Zero Touch Provisioning (ZTP) Support

Model VMR-8HD20-1

It's 3AM...

Do you know what your network gear is doing?

Blade servers, routers and other network devices often behave like children; you can't just walk away, turn your back and expect everything to be OK while you're not looking.

WTI's VMR series outlet metered PDUs can help you keep an eye on your network, and let you know when your equipment is acting up before things get completely out of hand. Knowing is only half the battle though, the VMR also allows you to automatically reboot outlets when an attached device ceases to respond, disable outlets to reduce current consumption or switch on cooling devices to lower rack temperature.

The VMR includes a robust selection of monitoring features, including event alarms, outlet-specific metering and SNMP polling to help you keep tabs on vital network elements, avoid costly service calls and maximize up time.

The VMR can let you know when:

- Rack Temperature is Too High
- An Outlet is On, But the Attached Device is Off
- Your Power Supply has Been Interrupted
- Current Consumption Increases or Decreases
- Excessive Invalid Passwords are Attempted
- Devices Fail to Respond to Ping Commands
- An Outlet Draws Excessive Current
- A Circuit Breaker is Open

Per Outlet Power Data via
Web, XML, CSV or ASCII
